

Credit Name: CSE 2120

Assignment Name: Chapter 9 CRT

Question #1

- The third element of an array has a value of 2

Question #2

- `int[] height = new int[20];`

Question #3

- `double[] height = {1.65, 2.15, 4.95};`

Question #4

- `for(double i : grades) {`
 - `System.out.println(grades[i]);`
- `}`

Question #6

Passing an entire array requires a loop that goes through each index, while a single element of the array just needs the index number.

Question #7

Off set arrays are needed if you want to check the surrounding indexes eg:

- `array[i];`
- `array[i+1];` |
- `array[i-1];` | -> these check 1 less and 1 more than the current index

Question #8

- It outputs "l" from "Elaine"

Question #10

If you have multiple classes of students and need to add their grades for each class, but the classes vary in size.

Question #11

`indexOf()` checks if the object is in the array.

Question #12

They can be compared by using:

- `.equals()`
- `==`
- `>`
- `<`
