```
if (y < 100) {  
    y +=2;  
}
```

Question #2

```
if( num1 > num2 ){  
    System.out.println("The first number is higher");  
}  
else if( num1 < num2 ){  
    System.out.println("the second number is larger");  
}  
else if( num1 == num2 ){  
    System.out.println("numbers are equal");  
}
```

Question #3

a) The first one even teh second is odd

b)

```
switch (num%2){  
    case 0:  
        System.out.println("number is even");  
        break;  
    case 1:  
        System.out.println("number is odd");  
}
```

Question #4

- a) (int Math.random()*50)+1;
- b) (int Math.random()*80)+20;
- c) (double Math.random()*10.0)+10.0;

Question #5

- 18 is never included
- 65 is never included
- Age is never initialized

Question #6

- a) true
- b) false
- c) true
- d) true
- e) true
- f) true
- g) true

Question #8

- a) False - it can be an equations
- b) False - an if else statement needs the previous if statement to be false
- c) False - the switch statement can be an integer
- d) True - even though they may seem random there is a pattern to them
- e) False - you can use the int cast type
- f) True - in fact it must contain more than one
- g) true
- h) False - ! is evaluated first
- i) true
- j) true
